

DIRECTOR OF ENGINEERING SERVICES

The Director of Engineering Services is responsible for the management and administration of Township services delivered by the following divisions within the Engineering Department:

- Roads, bridges, fleet management, sidewalks and streetlighting
- Solid waste management including administration of landfill sites, garbage collection and recycling
- water and wastewater (sewer) utilities
- Public transit which includes bus service and Ferry operations

The Director is responsible for the preparation of long-term strategy proposals to strengthen the Township's physical development in conformity with the Township's planning commitments. This requires a continuing understanding of the Township's planning industrial promotion activities and of development legislation.

This position liaises with officials of the Ministry of Environment on the water purification and sewage treatment services furnished to the Township, and with the Ministry of Transportation in the operation of the Amherst Island Ferry. The position is also responsible for the department's procurement requirements including appropriate consulting engineering services, tendered services, streetlighting and solid waste disposal services obtained under contract and the coordination and monitoring the treatment services provided by external agencies.

The Director also fulfills the role of Drainage and Fill Inspector.
