

Got one of these?

Make sure you dispose of it – safely!

Propane cylinders can be hazardous. Whether your cylinder is unvented or vented using a GreenKey, you need to dispose of it correctly. Here's how:

- Do not place any propane cylinders in your Blue Box recycling program. Keep your recycling operators safe.
- Take vented and unvented propane cylinders to your local Household Hazardous Waste depot or collection event. To find the nearest location, please call your local municipal waste management office or check out www.dowhatyoucan.ca.

**Thanks for putting hazardous waste
in the right place.**
